

Criteria-2

2.2.1. Assessment of Learning Levels of Students

&

Special Programmes for Slow and Advanced Learners

ADITYA COLLEGE OF PHARMACY

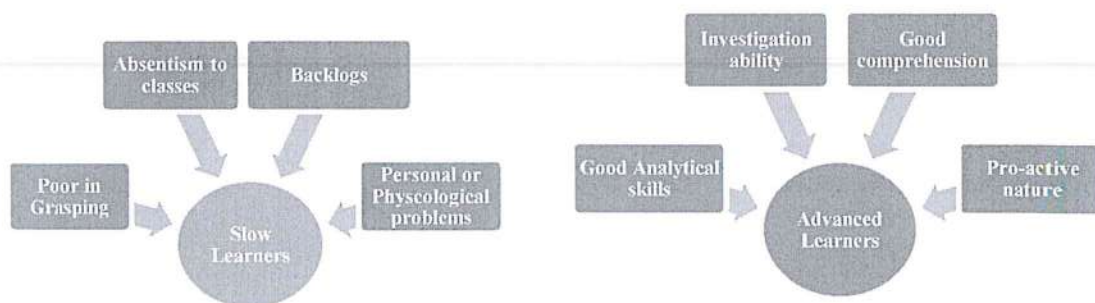

(Permanently affiliated to JNTUK, Kakinada, Approved by AICTE, New Delhi,)

Recognized by UGC Under Section 2() and 12 () of UGC Act 1956

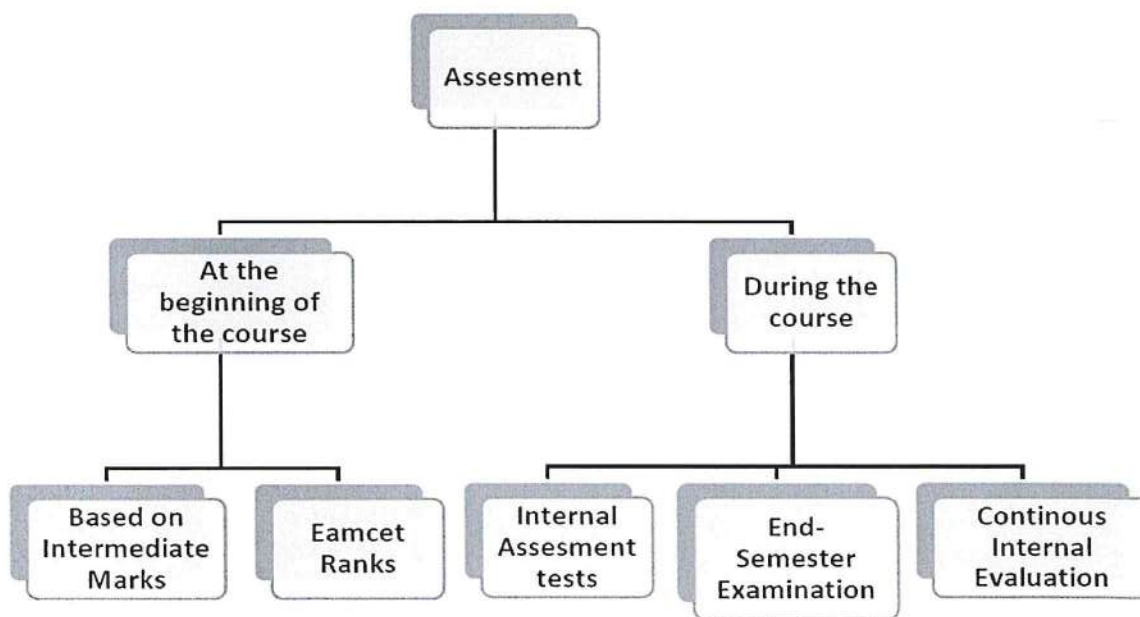

Aditya Nagar, ADB Road, Surampalem - 533 437

1. Identification Criteria for Slow and Advanced Learners

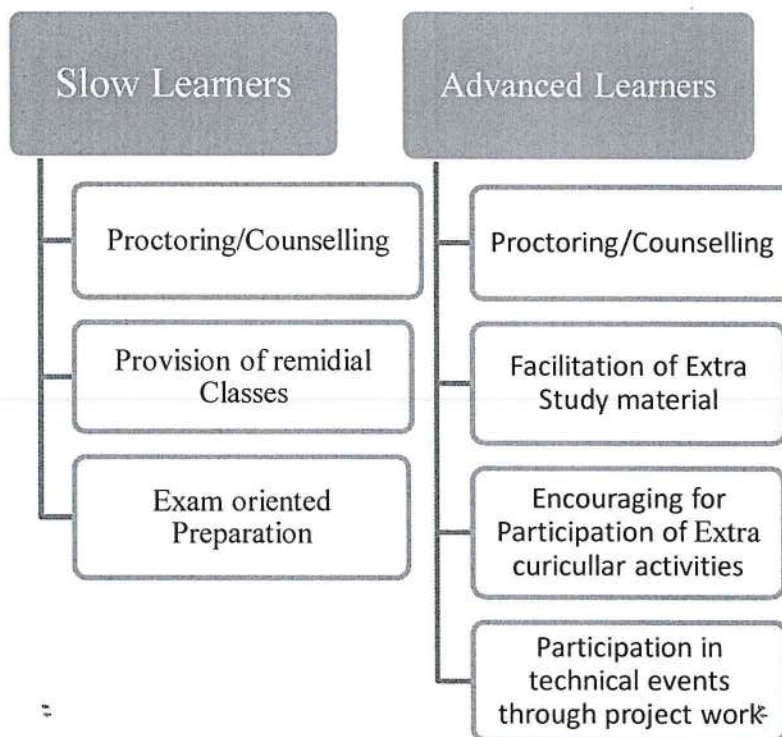

1.1. Assessment Mechanism for Slow and Advanced Learners

PRINCIPAL
Aditya College of Pharmacy,
SURAMPalem-533 437

1.2. Action Plan/ Programs for slow and advanced learners:

At Aditya College of Pharmacy, Students performance evaluation policy is in place. The objective of this policy is to devise a structural mechanism to

- Identify Learning Levels of the students
- Implement the action plan for Slow Learners and Advanced Learners with the objective to improve Students' Academic performance
- Monitor and evaluate the effectiveness of the Plan

1.3. Process set for Identification of Slow and Advanced Learners

- During the Teaching & Learning process (in Classroom and Laboratories) and through the student Proctoring process, the faculty classifies students as Slow and Advanced learners.
- The Teacher and the Faculty Proctor together analyse the learning abilities of Students based on the indicators such as academic performance and also behavioural, psychological and social aspects. To ensure that identification of the Slow and Advanced Learners is carried out properly, the Proctors also continuously interact with the respective class teacher.

I. Slow Learners are generally characterized as students with superficial learning abilities, poor/ slow grasping power, more absenteeism, sometimes with physical, personal and psychological problems and other developmental issues.

Characteristics of Slow Learners	Action Plan for Improvement
Physical and Psychological problems, visual general coordination, attention deficits, emotional instability, low self-esteem, time and action disorganisation	Thorough counselling and mentoring process
Academic – poor memory, difficulty in comprehension	Repeating the difficult concepts time to time so that it is well understood by the slow learner
Developmental issues – immature language pattern, speech / hearing issues	Conducting target oriented intensive sessions at institute instead of traditional classroom teaching
Poor attendance / Reluctance to learn / diversified interest	Adoption of specific required reading techniques
Weak or ill interest in studies	Remedial problem-solving sessions
Social – poor judgement, immature social behaviour, poor concentration	Providing short and specific direction to students to bring them to level of middle learners
Personal – frustration, aggression, anxiety	Providing extra care during individual based, customized practice session for critical courses

II. Advanced Learners are characterized as students with meaningful and deep investigation-oriented approach and analytical abilities, good comprehension. Such students have a proactive attitude towards gaining knowledge in various fields and facing challenges.

Characteristics of Advanced Learners	Action Plan for Improvement
Very alert and proficient	Continuously inspiring and encouraging
Rapid learning ability and excellent memory	Allowing more choices and offer challenges
Advanced comprehension and abstract ideas	Providing sufficient & extra platform for resources
Enjoy solving problems	Building professional & productive mind-set by giving real life and real time cases and problems
Self-taught reading and writing skills	Motivating so that they develop to think differently and act on unusual problems
Abstract thinking, logical & insightful	Encouraging self-assessments
Longer attention and intense concentration	Thorough counselling and mentoring
Pre-occupied with own thoughts and ideas	Concentrative approach to make them distinguished merit holders in university
High interest in experimentation and doing things differently	Encouraging to participate in co-curricular, extra-curricular and other sport activities
Desire to organize, manage & complete tasks	Encouraging to participate in technical events

ADITYA COLLEGE OF PHARMACY
Aditya Nagar, ADB Road, SURAMPALAM - 533 437, E.G.D.
ACADEMIC YEAR 2018 - 2019
17/03/2019
V/II/IV - B. PHARMACY, M. PHARMACY & PHARM.D

Date: 23/3/2019
Sub: Industrial Pharmacy
Page No: 182/18017
Signature of the Registrar: G. Prasanna
Marks Obtained:

1) plot plant - It is a part of pharmaceutical for producing tablets. It is a large scale process. $134+10=144$

2) plot plant design - The plot plant is designed in such a way so that the raw materials are easily brought and the shipment place facilities easily. The floors are concrete building and surrounded the plot area should be fitted to the selling. The lights are should be followed by RPD floor. The area should be followed by RPD floor.

3) Raw materials - The raw materials should be brought from the plot to the plot plant by the shipment.

4) RPD & supports - The RPD and supports are to the plot and the shipment information is provided.

Blending - The RPD, supports, etc. to be blended before the initiation of the other process. The blending of the materials is achieved by having proper blending equipment.

1) core blends
2) double core blends
3) single core blends

4) the materials are mixed in a large scale blender to avoid the contamination of the final blending.

lubrication - The lubricants are added to reduce the friction and stop of the tablets.

drying - The drying of the tablets is taken place in a tray dryer with the low thickness. The drying is increasing the thickness. The tablets do not get lost required for drying.

The nozzle is should be spray type nozzle and the slope of the tray should be low other the dyes may be shifted to bottom.

size reduction - The size reduction of the capsules and the RPD are having a the size side than the required size so that the size reduction is applied it is achieved by the hammer mill and sieve to provide the particles should be the required size.

ADDITIONAL SHEET

regulation - The raw materials are not taken separately of a tablet.

blending - blending

The blending is done during the drying and mixing of the raw materials. The blending is achieved by the machine which is used of the process. The blending is done in a large scale blender.

regulation - The regulation is achieved by the machine which is used of the process. The regulation is done in a large scale blender.

1) regulation - The regulation is achieved by the machine which is used of the process. The regulation is done in a large scale blender.

2) regulation - The regulation is achieved by the machine which is used of the process. The regulation is done in a large scale blender.

3) regulation - The regulation is achieved by the machine which is used of the process. The regulation is done in a large scale blender.

4) regulation - The regulation is achieved by the machine which is used of the process. The regulation is done in a large scale blender.

5) regulation - The regulation is achieved by the machine which is used of the process. The regulation is done in a large scale blender.

6) regulation - The regulation is achieved by the machine which is used of the process. The regulation is done in a large scale blender.

7) regulation - The regulation is achieved by the machine which is used of the process. The regulation is done in a large scale blender.

8) regulation - The regulation is achieved by the machine which is used of the process. The regulation is done in a large scale blender.

9) regulation - The regulation is achieved by the machine which is used of the process. The regulation is done in a large scale blender.

10) regulation - The regulation is achieved by the machine which is used of the process. The regulation is done in a large scale blender.

1) RPD - The RPD is a part of pharmaceutical for producing tablets. It is a large scale process. $134+10=144$

2) plot plant - The plot plant is designed in such a way so that the raw materials are easily brought and the shipment place facilities easily. The floors are concrete building and surrounded the plot area should be fitted to the selling. The lights are should be followed by RPD floor. The area should be followed by RPD floor.

3) Raw materials - The raw materials should be brought from the plot to the plot plant by the shipment.

4) RPD & supports - The RPD and supports are to the plot and the shipment information is provided.

5) regulation - The regulation is achieved by the machine which is used of the process. The regulation is done in a large scale blender.

6) regulation - The regulation is achieved by the machine which is used of the process. The regulation is done in a large scale blender.

7) regulation - The regulation is achieved by the machine which is used of the process. The regulation is done in a large scale blender.

8) regulation - The regulation is achieved by the machine which is used of the process. The regulation is done in a large scale blender.

9) regulation - The regulation is achieved by the machine which is used of the process. The regulation is done in a large scale blender.

10) regulation - The regulation is achieved by the machine which is used of the process. The regulation is done in a large scale blender.

Typical Case
 A 45-year-old male patient, Mr. A. S. Reddy, was brought to the hospital by his wife. He had been suffering from a chronic cough and sputum production for the past 10 years. The cough was worse in the morning and at night. He had also experienced weight loss and fatigue. The patient was a regular smoker and had a long history of alcohol consumption. He was brought to the hospital by his wife, who was concerned about his health. The patient was admitted to the hospital and underwent a series of investigations. The investigations revealed that the patient had a chronic cough and sputum production, which was consistent with a diagnosis of chronic bronchitis. The patient was treated with a course of antibiotics and a cough suppressant. He was also advised to quit smoking and to limit his alcohol consumption. The patient was discharged from the hospital and was advised to follow up with his primary care physician. The patient's condition improved significantly after treatment.

2.5.4 Sample Answer Sheets week end Exam

1) Geometric Isomerism
 Geometric isomerism, also known as cis-trans isomerism or configuration isomerism, arises from the spatial arrangement of atoms within molecules.
 Isomers refer to compounds that share the same empirical formula but differ in the structural arrangement of atoms.
 Remember, the geometric isomer describes the orientation of a functional group in a compound.
 Generally, in a geometric isomer, the atoms are connected by a double bond that does not rotate. But it can also happen because of the ring structure.
 Based on the position of the functional group, the isomers are named as *cis* and *trans*.
 When a similar group is placed on the same side,

position of the compound is named as *cis* isomer. When the similar groups are on opposite sides, it is named as *trans* isomer.
Free Radical chain reaction in aliphatic compounds
 A free radical reaction is a chemical mechanism in which unpaired electron (free radicals) are involved in the reaction.
 The radical species may be starting compound or product that the next reaction can be reaction involving radicals or initiation in organic chemistry.
 Mechanism of free radical:
 The general methods are used:
 1) Thermal generation
 2) Photochemical generation
 3) Redox generation
Initiation:
CC1CCCCC1.[hv]>>CC1CCCCC1.[CH2]

Handwritten signature

PRINCIPAL
 Aditya College of Pharmacy
 SURAMPALEM- 533 437

ADDITIONAL SHEET

Functional isomers The compounds which have the same molecular formula but differ in the attachment of functional group to the carbon chain.

The functional group is attached at the different position.

eg. 1,2-dichlorobenzene m-dichlorobenzene

Functional isomers The compounds which have the same molecular formula, but the different functional is attached to it.

eg. methyl propyl ether dimethyl propyl ether

$\text{CH}_3\text{-O-CH}_2\text{CH}_2\text{CH}_3$

$\text{CH}_3\text{-O-CH(CH}_3\text{)-CH}_2\text{CH}_3$

Metamerism The arrangement of the carbon atoms differ on both side of the compound. Substances of the carbon on the side of the functional group.

eg. acetyl methyl ether dimethyl propyl ether

$\text{CH}_3\text{-CO-O-CH}_2\text{CH}_2\text{CH}_3$

$\text{CH}_3\text{-O-CO-CH}_2\text{-CH}_2\text{-CH}_3$

Reaction	Reaction
The E_1 reaction involves an intermediate called	The E_2 reaction involves with the intermediate called
This reaction mechanism usually takes place in two steps.	This reaction mechanism takes place in one step.
Reaction mechanism follows guthrie rule.	No intermediate is formed.
The rate of reaction of the unimolecular where the concentration of the substrate molecule.	No such effect.
The reaction mechanism order of E_1 is $3/2, 2, 1$.	Polysubstituted alkene
The product obtained is quite	Polysubstituted alkene are best
because the intermediate are formed	grouped group is eliminated & the product alkene is quite stable by resonance.
Strong substituted alkenes are formed.	
The order of reactivity $3^\circ > 2^\circ > 1^\circ$.

Sample Answer Sheets week end Exam

ADITYA COLLEGE OF PHARMACY

QUESTION

Advantages of oral loading

Oral loading is a technique used for a relatively short duration of treatment. It involves giving a high initial dose followed by a lower maintenance dose. This helps in achieving therapeutic levels quickly.

Disadvantages

Oral loading is not suitable for all drugs. It is only suitable for drugs that have a long half-life and a narrow therapeutic index. It is also not suitable for drugs that are highly toxic or have a high risk of side effects.

Advantages

Oral loading is a simple and convenient method. It does not require any special equipment or techniques. It is also a cost-effective method.

Disadvantages

Oral loading is not suitable for all drugs. It is only suitable for drugs that have a long half-life and a narrow therapeutic index. It is also not suitable for drugs that are highly toxic or have a high risk of side effects.

ADITYA COLLEGE OF PHARMACY

ANSWER

Advantages of oral loading

Oral loading is a technique used for a relatively short duration of treatment. It involves giving a high initial dose followed by a lower maintenance dose. This helps in achieving therapeutic levels quickly.

Disadvantages

Oral loading is not suitable for all drugs. It is only suitable for drugs that have a long half-life and a narrow therapeutic index. It is also not suitable for drugs that are highly toxic or have a high risk of side effects.

Advantages

Oral loading is a simple and convenient method. It does not require any special equipment or techniques. It is also a cost-effective method.

Disadvantages

Oral loading is not suitable for all drugs. It is only suitable for drugs that have a long half-life and a narrow therapeutic index. It is also not suitable for drugs that are highly toxic or have a high risk of side effects.
