## REPORT ON REDUCE, REUSE & RECYCLE [RRR]

**Place: Kotapadu,**

**Date: 09-09-2021.**

The Environmental policy majorly includes reducing, reusing and recycling as its part which is mainly because of the increased costs of solid and hazardous-waste disposal, the scarcity of natural resources, and the growing concern over polluted land, water, and air. Keeping this in view an awareness drive was began by the III year students of Aditya College of Pharmacy to educate the people on the concept of Reduce, Reuse & Recycle [RRR]. This took place at the area of Kotapadu where the students took a note on explaining to the nearby people at household and shops about RRR. They explained that this could be an outstanding way to protect the environment and decrease universal carbon emissions by Recycling, an old practice with numerous modern applications being significant to the natural environment as well as human beings. They educated them that

- Reduce means to cut back on the amount of trash we generate.
- Reuse means to find new ways to use things that otherwise would have been thrown out.
- Recycle means to turn something old and useless into something new and useful.

It refers to the revival and reuse of resources from spent products and is necessary if we want to protect this world for our prospect generations. This Saves the Earth, Energy and helps in Reducing Global Warming and Waste Products in Landfills ultimately helps in saving money.

## REPORT ON AWARENESS DRIVE ON SOUND & AIR POLLUTION

**Place: Peddapuram & Samarlakota**

**Date: 02-11-2021.**

Diwali, the spectacular Hindu festival of lights is celebrated all over the country symbolizing victory of light over dark, but presently burning of firecrackers is the highlight of Diwali and for most of the people, Diwali is just a synonym to a night full of crackers noise and smoke; Brighter the sparkles, louder the noise the greater the thrill. But bursting of fire crackers create significant pollution and its health impacts remain for several days. The problem carries its effect on human beings, animals and birds equally. Taking this into consideration, the students of Aditya College of Pharmacy took a lead in educating the nearby people about the hazards created on the environment due to the air and noise pollution produced at the times of Diwali. They intimated the people about the ill effects of firecrackers and must strictly avoid burning them as maximum pollution during Diwali occurs due the release of toxins which certainly makes it hard for people to breathe. Moreover, loud noises from firecrackers give anxiety attacks to many people and animals. The remnants of the firecrackers can cause land pollution and are also toxic for animals. Therefore, people must use eco-friendly crackers. These eco-friendly crackers produce a low amount of noise. Nevertheless, avoiding the use of firecrackers could be the best solution. Further the students educated them to use green crackers and eco-friendly candles and lamps.
